

V-Ray Training Contents

V-Ray is a commercial rendering plug-in for 3D computer graphics software applications. It is developed by Chaos Group, a company based in Sofia, Bulgaria, established in 1997. V-Ray is used in media, entertainment, and design industries such as film and video game production, industrial design, product design and architecture.

V-Ray is a rendering engine that uses advanced techniques, for example global illumination algorithms such as path tracing, photon mapping, irradiance maps and directly computed global illumination.
